

The geometry of the Ma-Trudinger-Wang condition

Alessio Figalli
University of Texas

In this talk, I'll first review some recent results concerning the question of finding necessary and sufficient conditions ensuring continuity of optimal transport maps on Riemannian manifolds. Then we will see how the Ma-Trudinger-Wang condition, first introduced to prove regularity of optimal transport maps, can be used as a tool to obtain geometric information on the cut locus of the underlying manifold.
