

Parabolic equations and the Ricci flow on manifolds with boundary

Artem Pulemotov
The University of Chicago

In the first part of the talk, we will focus on a second-order quasilinear parabolic equation in a vector bundle over a compact manifold M with boundary. Our goal is to formulate a short-time existence theorem for this equation. In the second part, we will discuss the Ricci flow on M . The objective is to propose new boundary conditions for the flow and state a series of short-time existence results.
