b) What does it say about a pair y_1, y_2 of solutions of a SOLODE? c) State Abel's theorem. State the existence and uniqueness theorem for the general FOODE. State the existence and uniqueness theorem for the SOLODE. Describe Euler's one-step approximation method - how do you get from one point to the next' Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	What does the Wronskian do for you?	
State Abel's theorem. State the existence and uniqueness theorem for the general FOODE. State the existence and uniqueness theorem for the SOLODE. Describe Euler's one-step approximation method - how do you get from one point to the next Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	a) How is it defined: $W[y_1, y_2] \stackrel{\text{def}}{=}$	
State the existence and uniqueness theorem for the general FOODE. State the existence and uniqueness theorem for the SOLODE. Describe Euler's one-step approximation method - how do you get from one point to the next Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	b) What does it say about a pair y_1, y_2 of solutions of a SOLODE?	
State the existence and uniqueness theorem for the SOLODE. Describe Euler's one-step approximation method - how do you get from one point to the next' Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	c) State Abel's theorem.	
Describe Euler's one-step approximation method - how do you get from one point to the next Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	State the existence and uniqueness theorem for the general FOODE.	
Describe the method of Integrating Factors. What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	State the existence and uniqueness theorem for the SOLODE.	
What does it mean to say that $\phi(t)$ is a solution of $y' = f(t, y)$?	Describe Euler's one-step approximation method - how do you get from one point to th	e next?
Find the general solution of the FOLODE $ty' + 2y = \sin t, t > 0.$		
	Find the general solution of the FOLODE $ty' + 2y = \sin t, t > 0.$	

Answer: y =

Answer: The pig was slaughtered	hours before discovery.
Angway	
of $37^{\circ}C$, when did death occur?	
temperature is measured immediately and is four is down to $7^{\circ}C$. Assuming that at the time of definition of $370^{\circ}C$.	nd to be $27^{\circ}C$. Three hours later its temperature eath the body had the normal body temperature
A corpse is discovered hanging on a hook in a temperature is measured immediately and is found	a meat locker that is being kept at $-3^{\circ}C$. Its

Answer: (a): $Y(t) =$	(b): $T =$
(b) At which time T does $Y(T)$	reach 60% of the carrying capacity?
(a) Find $Y(t)$	sfies the logistic equation $Y' = Y(1 - Y/1000)$. At time $t = 0$ its ing capacity. The reach 60% of the carrying capacity?
A certain population $Y(t)$ satisfies value $Y(0)$ is 30% of the carryi	sines the logistic equation $Y = Y(1 - Y/1000)$. At time $t = 0$ its ing capacity.

Find an integrating factor μ and solve $y dx + (2x - ye^y) dy = 0$.

Answer: $\mu(\) =$, sol'n: = c

The FOOIVP

$$y' = \frac{1}{1 + t^2 y^3} \;, \qquad \qquad y(1) = 1 \;,$$

cannot be handled with any of our four methods, so you decide to approximate y(1.2) using Euler's method. What approximate value for y(1.2) do you get?

Answer: $y(1.2) \approx$

!!!Read the whole problem before answering!!!

- a) Describe the most general circumstance in which the Method of Variation of Parameters applies.
- b) What is it intended to accomplish?
- c) How does it work?

!!!Read the whole problem before answering!!! a) Describe the most general circumstance in which the Method of Reduction of Order applies. b) What is it intended to accomplish? c) How does it work?
Find a particular solution of $y'' + 4y = 3 \csc t$. [Hint: $\int \csc t dt = \ln \csc t + \cot t + C$.]

Answer: Y =

Use Undetermined Coefficients (!) to find the general solution of $y'' + 2y' + 5y = 3\cos(2t)$.

Answer: y =

Do one of: p190 # 1-21; p203 # 1-12.

Answer:

Do one of: p249 # 1-20, 21-28; p259 # 1-14, 16-21; p265 # 1-17.

Answer:

Do one of: p271 # 1-14; p278 # 1-22.

Answer:

Do one of: p284 # 1-16; p292 # 1-17; p312 # 1-24; p322 # 1-16.

Answer:

Find the regular singular points of $(1-2x^2)y'' + xy' + y = 0$.

For each one of them predict the convergence radius of its "mucked-up Euler solution."

Answer:

!!!Read the whole question before answering its parts!!!

What does the ratio test for power series do for you?

- (a) When does it apply and what does it produce?
- (b) What exactly does it say?
- (c) Can you use it to determine the convergence radius for the cosine series $\cos x = 1 x^2/2! + x^4/4! \pm \dots$?

!!!Read the whole question before answering its parts!!!

Suppose the functions P, Q, R in the SOLODE P(x)y'' + Q(x)y' + R(x)y = 0 are analytic at the point x_0 .

(a) What does it mean that x_0 is an ordinary point?

Answer: x_0 is an ordinary point if

- (b) If x_0 is an ordinary point, what do you do?
- (c) What can you say about the convergence radius of the resulting power series?

Complete the following definitions concerning the SOLODE

$$P(x)y'' + Q(x)y' + R(x)y = 0 (*)$$

, s

with analytic coefficients P, Q, R:

- (a) x_0 is an ordinary point for (*) if
- (b) x_0 is a singular point for (*) if
- (c) x_0 is a regular singular point for (*) if

!!!Read the whole question before answering its parts!!!

Suppose the functions P, Q, R in the SOLODE P(x)y'' + Q(x)y' + R(x)y = 0 are analytic at the point x_0 .

(a) What does it mean that x_0 is a regular singular point?

Answer: x_0 is a regular singular point if

- (b) If x_0 is an regular singular point, what do you do?
- (c) What can you say about the convergence radius of the resulting series?

Ve) Write down the general Euler equation and describe how you would treat it.

Some Laplace Transforms

f(t)	F(s)	f(t)	F(s)
$\sin at$	$a/(s^2+a^2)$	t^n	$n!/s^{n+1}$
$\cos at$	$s/(s^2+a^2)$	$u_c(t)f(t-c)$	$e^{-cs}F(s)$
Sinh at	$a/(s^2 - a^2)$	$\delta_c(t)$	e^{-cs}
Cosh at	$s/(s^2-a^2)$	f(at)	$a^{-1}F(s/a)$
f'(t)	sF(s) - f(0)	$e^{ct}f(t)$	F(s-c)
f''(t)	$s^2F(s) - sf(0) - f'(0)$	f * g(t)	F(s)G(s)

To which signal functions f does the Laplace transform apply?

(b) Write down the definition: $\mathcal{L}\{f\}(s) \stackrel{\text{def}}{=}$

Compute the Laplace transform of some simple function.

Write down the definition of the convolution of two functions f, g.

How do convolution and Laplace transform interact?

Do one of: p312 # 1-24; p322 # 1-16; p337 # 1-16; p344 # 1-12, 17-22; p351 # 1, 3-10; p351 # 3-11, 13-18; p322 # 1-26.

For example, find the Laplace–inverse of $F(s) \stackrel{\text{def}}{=} \frac{e^{-s}}{s^2(s^2-1)}$. Answer: $\mathcal{L}^{-1}{F(s)}(t) =$

Do one of: p344 # 1-12, 17-22; p351 # 1, 3-10; p351 # 3-11, 13-18; p322 # 1-26. Let the function $g:[0,\infty)\to\mathbb{R}$ be defined by [drawing it might help]

$$g(t) \stackrel{\text{def}}{=} \begin{cases} t & \text{for } 0 \le t \le 1, \\ 2 - t & \text{for } 1 \le t \le 2, \\ 0 & \text{for } 2 \le t < \infty. \end{cases}$$

Use the Laplace transform to solve the IVP y'' - y = g, y(0) = 1, y'(0) = 0.

$$\text{Answer: } y = \qquad + \left\{ \begin{array}{c} \text{for } 0 \leq t \leq 1; \\ \\ \text{for } 1 \leq t \leq 2. \\ \\ \text{for } 2 \leq t < \infty. \end{array} \right.$$

Apply the Laplace Transform to a CCSOLODE with Impulse Input.

A weight of mass 100g stretches a spring 10cm. If the mass is pulled down an additional 3cm and then is released, and if there is no air resistance, determine the displacement u(t) of the mass at any time t.

[The gravitational constant in the metric system is roughly $10m/sec^2$. Remember that 100cm = 1m]

Answer: u(t) = [m], time in [sec].

Find the general power series solution of 2y'' + (x+1)y' + 3y = 0 about the point $x_0 = 2$.

Solve the SOLIVP $x^2y'' + 3xy' + 5y = 0$, x > 0, y(1) = 1, y'(1) = -1.

Answer:

Find the Laplace-inverse of $F(s) \stackrel{\text{def}}{=} \frac{2}{(s-3)(s^2-4s+5)}$.

Solve $y'' + y = u_{\pi}$, y(0) = 1, y'(0) = 0.

Look at the old quizzes. I might put one similar to them on the test.

Describe the Euler method, the improved Euler method, and the Runge–Kutta method, including estimates of the local and global errors in terms of the step size, and the number of computations required.

(a) State Fourier's theorem.

Describe the Gibbs phenomenon.

Describe the method of separation of variables.

What are even (odd) functions?

How can you get a pure sine (cosine) series for a function $f:[0,L]\to\mathbb{R}$ from Fourier's theorem?

Do one of: p449 #1ab-12ab; p456 # 1-12; p461 # 1-12.

<u>Do one of: p610 # 1-6; p575 # 1</u>–21; p585 # 1-24; p592 # 1ab-6ab, 7a-12a; p 600 # 1-26.

Let $f: [-\pi, \pi] \to \mathbb{R}$ be the function defined by [drawing it might help]

$$f(x) = \begin{cases} -\pi - x & \text{for } -\pi \le x \le -\pi/2 \\ x & \text{for } -\pi/2 \le x \le \pi/2 \\ \pi - x & \text{for } \pi/2 \le x \le \pi \end{cases}$$

(a) Find the Fourier series \widetilde{f} of f. (b) At which points x is $f(x) = \widetilde{f}(x)$? (Give reasons)

Answer: (a) $\widetilde{f}(x) =$

and (b) $\widetilde{f}(\pi) =$

Answer:

Solve the heat conduction problem $u_t = 7u_{xx}$ in an insulated rod of length π whose ends are maintained at 0° Celsius at all times and whose initial temperature u(x,0) is given by $u(x,0) = f(x) \quad \forall x \in [0,2\pi]$, where

$$f(x) \stackrel{\text{def}}{=} \begin{cases} x & \text{for } 0 \le x \le \pi/2, \\ \pi - x & \text{for } \pi/2 \le x \le \pi. \end{cases}$$

Answer: u(t, x) =

Do one of: p610 # 1-14; p620 # 1-14; p632 # 1-8.

Do one of: p 7 # 1, 3, 5, 11, 13, 15, 17, 19, 21; p 15 # 1–7; p 24 all; p 39 # 1–30; p 47 # 1–20, 30–38.

Answer:

Do one of: p 59 # 1–14. p 99 # 1–22; 25–31; p 88 # 1–4, 16; p107 # 1–4.

Answer:

Do one of: p 75 # 1–12; p142 # 1–25; p151 # 1–14.

Answer:

Do one of: p158 # 15–21; p164 # 1–25; p172 # 1–15, 20, 22–30.

Answer:

Do one of: p184 # 1-26.

Answer:

Find the regular singular points of $(1-2x^2)y'' + xy' + y = 0$. For each one of them predict the convergence radius of its "mucked-up Euler solution."

Answer:

!!!Read the whole question before answering its parts!!!

What does the ratio test do for you?

- (a) When does it apply and what does it produce?
- (b) How does it work?
- (c) Can you use it to determine the convergence radius for the cosine series $\cos x = 1 x^2/2! + x^4/4! \pm \dots$?

Write down the definition of the Laplace transform of a function f(t).

To which differential equations does the Laplace transform apply? How is the Laplace transform used to solve differential equations?

Write down the definition of the convolution of two functions f, g. How do convolution and Laplace transform interact?

Do one of: p311 # 1-24; p320 # 1-16; p329 # 1-17; p337 # 1-16;

Do one of: p344 # 1-12, 17-22; p351 # 1, 3-10; p351 # 3-11, 13-18; p320 # 1-26.

Apply the Laplace Transform to a CCSOLODE with Impulse Input.

- (a) State Fourier's theorem.
- (b) Describe the Gibbs phenomenon.
- (c) Describe the method of separation of variables.
- (d) What are even (odd) functions?
- (e) How can you get a pure sine (cosine) series for a function $f:[0,L]\to\mathbb{R}$ from Fourier's theorem?

Do one of: p451 1ab-12ab; p458 # 1-12; p463 # 1-12.

Do one of: p618 # 1-6; p593 # 1-24; p608 # 1ab-6ab, 7a-12a; p600 # 1-26; p610 # 7-12

Let $f: [-\pi, \pi] \to \mathbb{R}$ be the function defined by [drawing it might help]

$$f(t) = \begin{cases} -\pi - x & \text{for } -\pi \le x \le -\pi/2\\ x & \text{for } -\pi/2 \le x \le \pi/2\\ \pi - x & \text{for } \pi/2 \le x \le \pi \end{cases}$$

(a) Find the Fourier series \widetilde{f} of f. (b) At which points x is $f(x) = \widetilde{f}(x)$? (Give reasons)

Answer: (a) $\widetilde{f}(x) =$

and (b) $\widetilde{f}(\pi) =$

- I) (a) Apply the Laplace Transform to a CCSOLODE with Impulse Input. I') (a) State Fourier's theorem. (b) Describe the Gibbs phenomenon. (c) Describe the method of separation of variables. (d) What are even (odd) functions? (e) How can you get a pure sine (cosine) series for a function $f:[0,L]\to\mathbb{R}$ from Fourier's theorem? theorem?

Do one of: p344 # 1-12, 17-22; p351 # 1, 3-10; p351 # 3-11, 13-18.

Answer:

Do one of: p449 #1ab-12ab; p456 # 1-12; p461 # 1-12.

Answer:

Let $f: [-\pi, \pi] \to \mathbb{R}$ be the function defined by [drawing it might help]

$$f(t) = \begin{cases} -\pi - x & \text{for } -\pi \le x \le -\pi/2\\ x & \text{for } -\pi/2 \le x \le \pi/2\\ \pi - x & \text{for } \pi/2 \le x \le \pi \end{cases}$$

(a) Find the Fourier series \widetilde{f} of f. (b) At which points x is $f(x) = \widetilde{f}(x)$? (Give reasons)

Answer: (a) $\widetilde{f}(x) =$

and (b) $\widetilde{f}(\pi) =$

Do one of: p585 # 1-24; p529 # 1-12; p 600 # 1-26.

Answer:

Solve the heat conduction problem $u_t = 7u_{xx}$ in an insulated rod of length 2π whose ends are maintained at 0° Celsius at all times and whose initial temperature u(0,x) is given by $u(0,x) = f(x) \quad \forall x \in [0,2\pi]$, where

$$f(x) \stackrel{\text{def}}{=} \begin{cases} x & \text{for } 0 \le x \le \pi/2, \\ \pi - x & \text{for } \pi/2 \le x \le \pi. \end{cases}$$

Answer: u(t, x) =

Do a similar wave equation problem: let

$$f(x) \stackrel{\text{def}}{=} \begin{cases} x & \text{for } 0 \le x \le \pi/2, \\ \pi - x & \text{for } \pi/2 \le x \le \pi. \end{cases}$$

Solve the wave equation $u_{tt} = 81u_{xx}$ for a string of length π with initial conditions u(0, x) = f(x) and $u_t(0, x) = 0$.

Do a similar Laplace equation problem: Let

$$f(x) \stackrel{\text{def}}{=} \begin{cases} x & \text{for } 0 \le x \le \pi/2, \\ \pi - x & \text{for } \pi/2 \le x \le \pi. \end{cases}$$

Then solve the Laplace equation on a square sheet of side π with the boundary conditions $u(0,y) = u(x,0) = u(\pi,y) = 0$ and $u(x,\pi) = f(x)$.

Do one of: p610 # 1-14; p620 # 1-14; p632 # 1-8.
