Here is a priority list for your exam prep.

1. Learn all definitions, including (but not limited to) the definition of an arbitrage portfolio.
2. Independently solve the sample in-term exam.
3. Re-work all suggested problems from the course website. You probably want to work backwards from the new material to the older material.
4. Re-work homework problems.
5. Re-work problems from class (including quizzes and in-class assignments).
6. Ask for more problems.
