Subject: Missing TA session Thursday and Question about Talyor Series

Neil,

This is Kasey Studdard from your 8:30 TA session (57410). I will be out of town this coming Thursday and was wondering if I could take the quiz early. I am free during your office hours on Wednesday if that is acceptable.

Also, I had a question about Taylor series. Specifically, I was doing problem 12 in Section 12.10. It asks you to compute the Taylor series for $f(x)=x^3$ where $a=-1$. I did this and found that my Taylor series only had three terms, but all of the examples I remember from class have an infinite number of terms. Did I do something wrong?

Thanks,
Kasey
